

HANSA CARE 1050 Modified polysiloxane as an ingredient for Home and Car Care.

Description

This kind of silicone polymer is ideal to reduce the surface tension of liquid formulation to ensure a good spreading and wetting during application.

Key Features

- Wetting effect
- Levelling effect
- Cleansing effect
- Sheeting effect

Key Applications

- Floor Care
- Leather Care
- Furniture Care
- Car Care

Application

Due to the non-ionic character of HANSA CARE 1050 it can be easily combined with other finishing products. Its low surface tension enables an easy wetting of polar and non-polar hydrophobic surfaces such as e.g. polyethylene, polyvinyl chloride or siliconised materials by aqueous systems. This will improve the adhesion of care films, adhesives or coatings.
